

PESTOP: ProFume Treatment

After fumigating with Methyl Bromide (*fumigant*) for over 21 years **PESTOP** is proud to announce that we have undertaken our first precision fumigation using ProFume(sulfuryl fluoride). The changeover was a long and tedious one, so well done to all the staff for the effort put in for the training, dedication and stewardship programmes undertaken.

Well done to the Directors for the investment made to ensure **PESTOP** keeps up with technology and the advancements made in the pest control industry.

Thank you to our suppliers Fumico, especially Martin Steyn who guided us through this entire changeover. Much appreciated Martin.

Fumigation was a success. Property is safe to hand over to client for occupation.

Well done team. *Super proud of all of you!*
